FOR IMMEDIATE RELEASE

QR-Powered Digital Access Control With ParkStash + Spintly

We're excited to introduce our latest integration with Spintly, bringing QR code-based access control to gated parking, commercial buildings, and shared community spaces.

Through this collaboration, digital permits issued by ParkStash can now work seamlessly with Spintly's Zeon QR scanner, offering a modern, low-friction solution for secure property access.

How the Integration Works

Anyone reserving a digital permit through ParkStash receives a unique QR code. This code is scanned at the Spintly QR code reader, which is connected to a parking gate or building entry point.

If the permit is active and paid, the gate or door opens. If not, access is denied—ensuring only authorized users can enter. Upon exit, the QR code is scanned again, enabling automated time tracking and charging based on the duration of stay.

This not only improves compliance but also creates new revenue opportunities for properties through accurate, usage-based billing.

A Smarter Alternative to Traditional Access Methods

This integration extends beyond just parking entry. It can also be used to:

- Auto-validate permits at commercial or retail locations by scanning the QR code at an entry point or validation station.
- Secure shared amenities like gyms, pools, and lounges by allowing access only to users with active ParkStash permits.

It's one system for parking, validation, and access—fully digital, simple to manage, and easy to use.

Designed for Properties, Residents, and Guests

This integration delivers value across the board:

- Tenants and guests get a smooth, digital-first experience
- Property teams reduce operational overhead from managing fobs or cards
- Compliance and monetization improve through usage tracking

Whether it's for gated communities, retail centers, or commercial offices, ParkStash and Spintly together offer a future-ready solution for managing access without the hardware complexity.

Get in touch with us today for more information.

Spintly

Spintly is a global platform and a leading provider of cloud-based smart building solutions in the physical security space , it is transforming how physical spaces are secured. With its wireless mesh-powered hardware and cloud-native platform, It enables frictionless, smartphone-based access reducing the need for wiring, on prem infrastructure, and RFID cards.
